

## ABOUT US

Bluefish Pharmaceuticals is a Swedish generic pharmaceutical company offering affordable, high-quality medicines across several European markets. Founded on a tradition of Scandinavian quality and accountability, we cover a broad range of therapeutic areas with a focus on off-patent products — combining rigorous science, strong manufacturing partnerships, and deep market knowledge to ensure medicines reach the patients who need them.

We are entering an exciting new chapter. Guided by a clear five-year strategy, we are investing in higher-value formulations, expanding our product pipeline through disciplined R&D and co-development partnerships, and growing our European reach through out-licensing and distribution. Our approach is straightforward: focus on the right products, serve our markets with excellence, and build lasting partnerships that create value for patients and partners alike.

We welcome the opportunity to explore collaboration at CPHI Shanghai 2026.

# Product list
